

Weaver Wheels

They are made from stainless steel and roto-molded wheels that can hold up to a 600 pound inflatable or hard-shell dinghy. The wheels are designed to go over rocks and sand with ease. The bracket will pivot away from the motor so you can turn the motor without the wheels being in your way. The upper bracket is adjustable to different angles on the back of the transom for inflatable and hard-shell dinghies. The Weaver Wheels come with all the mounting hardware needed to put them on your dinghy. The Weaver Wheel comes with a lifetime manufactures warranty.
